

Bird Control Spike Brochure

Bird Control Spikes

Solar Panel Spike / House Martin Spikes / Window Spike

Have you got pigeons roosting under solar panels, house martins under roof eaves?

Solar Panel Spike can be easily fixed to the roof tiles under the solar panel. The protruding pins are angled to stick outwards which stop pigeons and starlings getting under the solar panel. The Panel Spikes are fixed directly onto the roof tiles, they do not interfere with the Solar Panel.

House Martin Spike (Swallows, Swifts) - This spike is perfectly angled to fix to the underside of house eaves stopping House Martins building nests in this area. The Spike can be fixed using high tack fixing silicone (we recommend a couple of screws hold the spike in place until the silicone cures).

Window Spike - Using this Spike system operators can now fix the whole spike direct to the window. Using a high tack fixing adhesive the bird spike will fix firmly in place, negating the need to use the window clip system which needs a two stage application (which can mean a 24 hour delay while the window clips cure before adding the appropriate Bird Spike).

Pipework – Fixed above pipework protecting it from birds while allowing access to cleaning the pipe.

Gutters - Where no established Gutter system works you can fix this Utility Spike to the inside edge of the guttering with fixing adhesive. The angled spikes will stop birds roosting on the leading edge of the gutter.

Plastic Spikes

The spikes are designed for use in the bird proofing industry in particular they should be used to deter pigeons. The product base is made from high quality, ultra violet light-stabilised polycarbonate (durable polycarbonate resin product code HFV-1700). The length of each strip is approximately 337mm. Temperature resistance: no loss of mechanical strength at a temperature of 130 degrees centigrade.

Key Features:

- **Use up to 50% less**

Spikes can be used for getting rid of pigeons from ledges with a depth up to 200mm (8 inches) wide.

- **Long Life Expectancy**

10 years warranty. A 4mm thick UV stabilised base

- **4 Rows of spikes**

The spikes have an extra two rows of spikes that are cleverly angled outwards making landing impossible from whichever direction the pigeons might approach.

- **Easily Snap Into Sections**

Along the base of the spike are 9 breakable sections that can be simply snapped apart with your fingers.

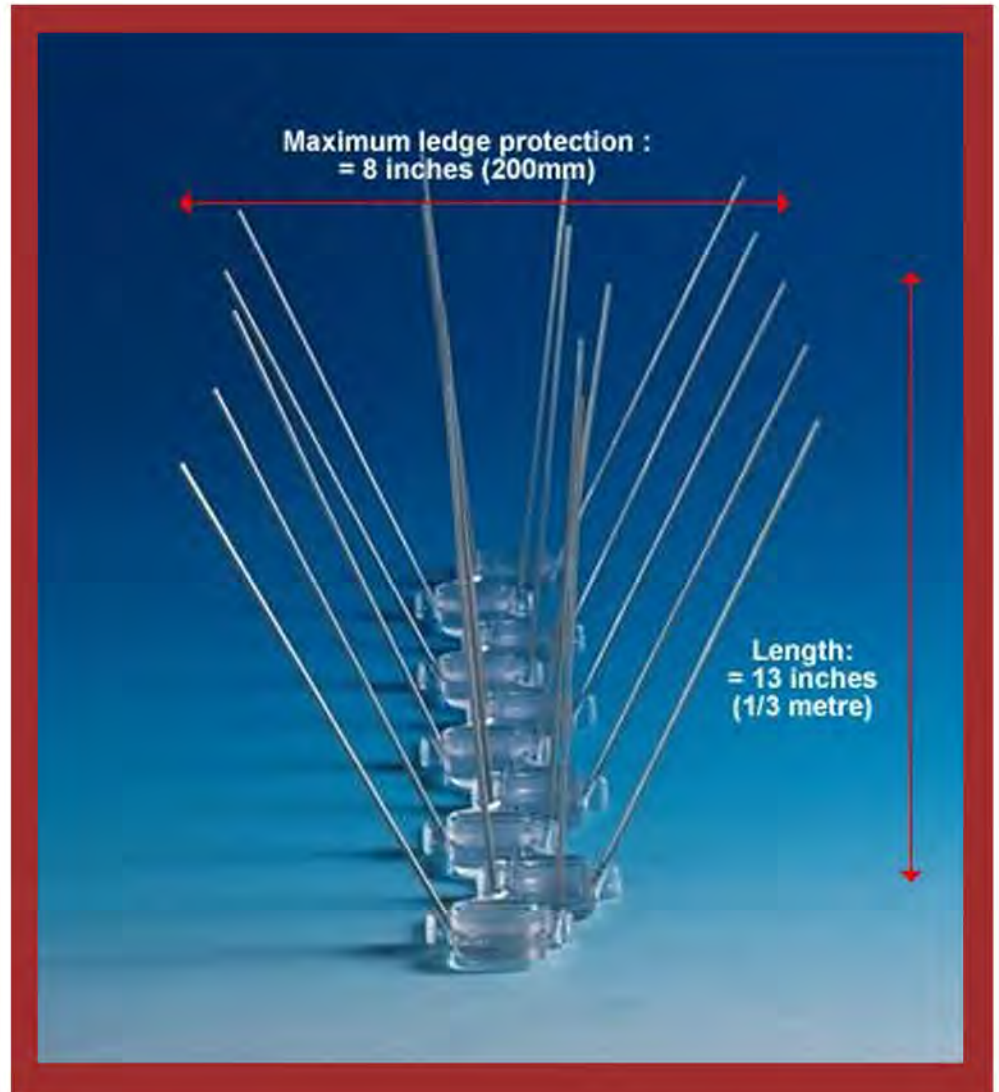

- **Patented Silicone Fixing Holes**

Along the base are 10 star shaped holes; when the spikes are pressed onto a ledge the silicone oozes through the holes forming star shaped rivets that lock the spike firmly to the surface.

Bird Control Spikes

Steel Bird Spikes

Steel Bird Spikes are specifically designed for getting rid of pigeons from ledges.

These Steel Bird Spikes are made from 304 grade stainless steel wires.
Product warranty for 12 years.

Each Strip length = 13 inches.
Ledge protection = up to 8 inches

Extra Wide Steel Spikes

Extra Wide Steel Bird Spikes are the widest of all our pigeon deterrents. They are a specifically designed pigeon deterrent spike that can be used to protect ledges with a depth of up to 12 inches (300mm).

- Our Steel Bird Spikes are made from 304 grade stainless steel wires protruding from a super tough Duroton UV stabilised polycarbonate base.
- Product warranty is 12 years
- Strip length equals 13 inches (one third of a metre)
- Ledge protection equals up to 12 inches (300mm).

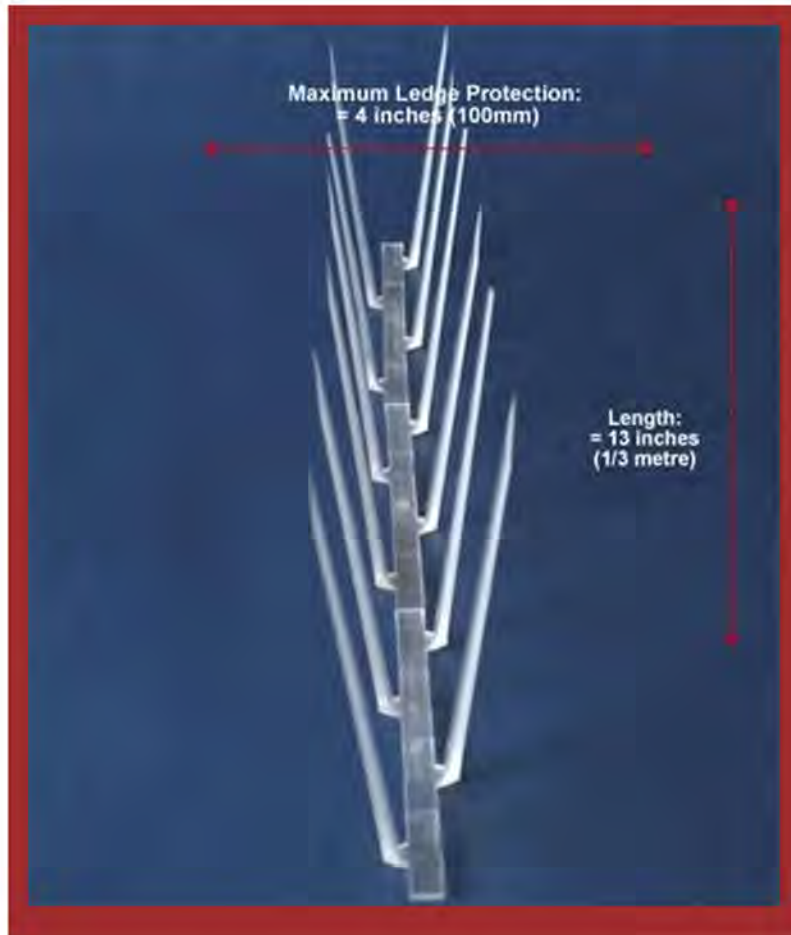

Ridge spikes

Ridge spike bird deterrents prevent pigeons, and other larger birds from perching on roof ridges. They have an angled base that fits directly and snugly onto all angled ridge tiles.

- Ridge bird deterrent spikes are made from stainless steel 304 grade wires which protrude from a super tough Durolon polycarbonate base. Product warranty is 12years.
- Strip length equals 13 inches (one third of a metre).
- Only our adhesive is recommended as other adhesives may not stick to the base.

Narrow spikes for smaller ledges

Plastic Pigeon Prevention Spike is designed for protecting very narrow ledges. It is tried and tested on ledges that have a depth of 1 to 4 inches (25mm to 100mm). It is suitable against even the heaviest Pigeon infestation.

- The Pigeon Spikes Plastic are made from super tough durolon UV stabilised polycarbonate. Product warranty is 10 years.
- Strip length equals 13 inches (one third of a metre)
- Ledge protection equals 1 to 4 inches (25mm to 100mm).

Flexible Gutter Clips

60 clips for 10 metres

Please do not hesitate to contact me if you require any further information. Prices are based on 1 metre minimum purchases.

Prices do vary depending on bulk ordering. None of the pricing includes postage and delivery as the costs depend on weight and size.

Specially formulated for the fixing of pigeon control spikes and bird control spikes to: brick, timber, lead, glass, concrete, steel, plastic and all other dry surfaces. We strongly recommend that you use this product as most other silicones will not stick to the base of the pigeon spike.

- Simply apply a 9 – 15mm (little finger size) bead of this super high tack silicone along the base of the spike.
- 35 year life expectancy
- Low modulus, neutral curing
- Temperature resistant to -60 degrees to 120 degrees
- High tack and high flexibility
- Good initial grab, sticks to porous and non porous surfaces.
